DT-4 Solid State Drive Destroyer

Why do you need secure destruction of your data storage devices?

In recent years, personal and business information has been under the constant threat of security breaches. Protecting the confidential information stored on decommissioned devices can help keep you or your company's intellectual property safe. Owning data destroying devices such as crushers and shredders can alleviate the threat of data recovery after a device's end of life, while keeping the management of this process in your hands, eliminating third party risk.

Converge Engineering's DT-4 Solid State Drive Destroyer is a patent pending design that utilizes manual force to perforate the memory chips on the most common types of SSD's. Destroying the flash chips on these drives keeps the media data from being recovered from unscrupulous individuals keeping your information safe.

This new technology using special gearing techniques allows the media to be destroyed by an operator's force without the use of electricity offering a device with ultimate portability and convenience. Our device provides improved cycle time of 10 seconds versus the industry leading electric powered of 30 seconds.

Specifications:

- Media – 2.5" SSDs
- Dimensions – 26.7" x 21.1" x 14"
- Cycle time – 10 seconds
- Weight – 78 lbs

Advantages:

- **No electricity required** – allows ultimate portability and planet friendly
- **Fast** – 10 sec cycle time, 200% decreased cycle time compared to others
- **Durable** – less components requires less maintenance
- **Portable** – lightweight aluminum body with carrying handles
- **Clean** – drop out bin for easy cleaning
- **Easy** – ergonomic ratcheting handle
- **Safe** – no exposed moving components
